DETAILED ACTION

Response to Amendment

The amendment filed on 10/2/2007 has been entered.

Response to Arguments

Applicant's arguments, see remarks, "Drawing Objection" on page 5, filed 10/2/2007, with respect to drawing objection have been fully considered and are persuasive. The objection of drawing has been withdrawn.

Allowable Subject Matter

Claims 1-8 are allowed. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art of record does not teach or suggest the invention of an electric lamp having a lamp vessel, a central current supply conductor and a side current supply conductor issuing from the lamp vessel, a lamp base having a notch, the side current supply conductor passing through the notch at a side facing the lamp vessel, and the side current supply conductor being provided with a coagulated droplet of material of the side current supply conductor at a side facing away from the lamp base, along with other claimed limitations.

Claims 2-8 are allowed due to claim dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Reiter (US 1,749,719) discloses an electric lamp (figure 1) having an illumination source, a central current supply conductor, a side current supply conductor, a lamp base with a notch, the side current supply conductor passes through the notch. However, Reiter does not disclose or suggest having coagulated droplet of material of the side current supply conductor at a side facing away from the lamp base.

Cunkelman (US 2003/0155858) discloses an electric lamp (figures 1 and 2) having an illumination source, a central current supply conductor, a side current supply conductor, a lamp base and lamp vessel, the lamp base with a hole, the side current supply conductor with a coagulated droplet of material of the lamp base. However, Cunkelman does not disclose or suggest having the coagulated droplet of material of the side current supply conductor, and a notch at a side facing the lamp vessel.
